

ABSTRACT OF THE DISCLOSURE

5 A fuel cell includes an anode electrode, a cathode electrode, and a third
electrode interposed between the anode and the cathode electrodes. The third
electrode preferably includes an electrically conductive component. The third
electrode preferably includes a metallic and a polymer grid and/or a conducting
polymer. The third electrode may be used to control processes of the anode and/or the
cathode electrodes. The third electrode may also be used to monitor the health of any
10 component of the fuel cell.
